

WASTE RECEPTION FACILITIES IN AUSTRALIAN AND NEW ZEALAND PORTS NOVEMBER 2009

This booklet has been prepared by the Australian Maritime Safety Authority (AMSA) and Maritime New Zealand (Maritime NZ) to assist ship operators comply with the MARPOL Convention by using shore based facilities to dispose of ship generated waste. Information contained in this booklet was initially compiled as part of the Australian and New Zealand Environment and Conservation Council (ANZECC) Maritime Accidents and Pollution Initiative 1995 Survey of Waste Reception Facilities in Ports, Boat Harbours and Marinas.

Australian Government

Australian Maritime Safety Authority

 **MARITIME**
NEW ZEALAND

IMPORTANT INFORMATION

Ships Agents

Wherever possible, arrangements for the use of reception facilities in Australian and New Zealand ports should be made through the ship's agent.

Noxious Liquid Substances

Australian and New Zealand port reception facilities for noxious liquid substances (NLS) will accept MARPOL categories X, Y and Z unless otherwise indicated.

Charges

Charges apply to the use of facilities unless otherwise indicated.

Inadequate Facilities

Should a ship's Master or agent find reception facilities in a port inadequate, for example as a result of insufficient capacity and/ or undue delay, the Master should communicate all relevant details to the vessel's Flag State and if possible to the Authorities of the port State (see IMO reporting format MEPC/Circ.469/Rev.1). Notification should be made as soon as possible. These deficiencies are then in turn reported by the Flag State to the International Maritime Organization and addressed as part of the regular reporting process established under MARPOL.

Quarantine

Quarantine regulations are strictly enforced in Australia and New Zealand. Quarantine wastes with respect to shipping include:

- organic galley and accommodation refuse, including nonwashable items which may have been in contact with such wastes;
- dunnage (wood, straw, matting and other packing material) and floor sweeping in some instances; and
- other organic wastes which may constitute a quarantine risk.

In Australia, all organic waste stored on decks of vessels must be secured in plastic bags, or metal or plastic bins with close fitting lids. In New Zealand, all organic waste must be secured within solid construction bins that are capable of being washed, eg metal or plastic.

It is essential that quarantine wastes are segregated from domestic wastes otherwise all wastes will need to be classified as quarantine waste and disposed of in a more controlled and potentially expensive manner. Quarantine waste must be removed by an authorised contractor to an approved quarantine waste disposal area.

For further information regarding Quarantine regulations, please contact:

Australian Quarantine and Inspection Service
www.aqis.gov.au
MAF Biosecurity New Zealand
www.biosecurity.govt.nz

IMPORTANT INFORMATION

International Convention for the Prevention of Pollution from Ships (MARPOL)

Ships in Australian and New Zealand ports are subject to inspection by surveyors and inspectors appointed in most ports for the purposes of enforcing MARPOL. Ship's Masters should be aware that surveyors or inspectors may ask to see records and receipts for ship waste disposals at sea and port reception facilities.
